Scanner Holder

Installation Instructions

Important notes

- Position the scanner holder on whichever column of the forklift is preferred by the operator, with the 'U' facing the operator's most frequented location when using a scanner gun. Ensure it is at an easily accessible height.
- Starting from the back of the scanner holder, thread a zip tie through one of the top holes and out the other.
- Close the zip tie around the forklift column and tighten, being sure to leave the locking mechanism on the outer side of the scanner holder, next to the forklift column.
- Cut off the excess length from the zip tie.
- Repeat with the other zip tie in the lower holes.
